TANGUY PAUVRET

SOFTWARE ENGINEER

RESUME

My journey is defined by agility and resilience. After graduating high school at 16 and earning a Bachelor's in Neuroscience at 19, financial constraints led me to the restaurant industry, where I honed my work ethic and client empathy before pivoting to tech.

During the pandemic, I reinvented myself through 42 Lausanne, completing the curriculum rapidly. This non-linear path has shaped me into an engineer who values both speed and substance.

My true passion lies in the engineering beneath the surface. I am driven by the complexity of system architecture and how data flows through an application. I approach code with the rigor of a scientist, analyzing how components interact to build robust, scalable solutions. I bring the analytical mindset of a researcher, the adaptability of hospitality, and a deep dedication to technical craftsmanship to my next role.

DEGREES

ÉCOLE 42 - IT solutions designer and developer

OCT. 2021 - JANUARY 2023 | LAUSANNE

Project-based program emphasizing autonomy, collaboration.

- Peer-to-peer learning
- Design and management of information systems
- Mainly C/C++

You can find my main projects on my GitHub profile. Such as:

- **minishell**: develop the basics of bash in C
- **containers**: reimplement vector, map and stack with C++
- And more!

UNIVERSITY - Bachelor - Animal Physiology and Neurosciences

2013 - 2016 | POITIERS

LYCÉE PAUL GUÉRIN - Scientific High School Diploma

2013 | NIORT

EXPERIENCES

LABSTER - LEAD SOFTWARE ENGINEER

NodeJS | Hono | Docker | React | Docker | CI/CD | DevOps

JANUARY 2026 - TODAY

I was recruited to **lead a project to create a medical assistant** in close collaboration with an AI Engineer, which is responsible for providing and training an in-house AI model. The goal of the mission is to **provide a documentation assistant for doctors**, with access to a renowned medical corpus.

RESILIO - SOFTWARE ENGINEER

JANUARY 2023 - TODAY (Lausanne)

Python | Django | Typescript | SQL | React | Docker | CI/CD | DevOps

Owned **full-stack development and infrastructure strategy**, **leading features from conception to production.** I align **technology strategy with business goals** through research and **metrics-driven decisions.**

Primary architect for two core products: **ResilioTech** (an LCA platform) and **ResilioDatabase** (a custom-built dynamic API for environmental data).

- **Spearheaded Enterprise SSO integration**, collaborating directly with large-scale clients to map requirements and **implement secure authentication workflows** compatible with their internal systems.
- **Drove observability and performance strategy** by **implementing the LGTM stack**; optimized Django ORM and Celery queues to reduce dashboard load times from 15 seconds to under 600ms.
- **Modernized the QA architecture** by replacing Cypress with Playwright; cut E2E test runtimes by 75% (1h to 15m) and eliminated flaky tests.
- Built CI/CD pipelines with GitHub Actions and Docker for **automated PR testing**; created isolated QA environments, streamlining multi-team workflows.

COOK

2017 - 2021 (Various restaurants) - Lacanau, Genève

Transition period between my studies and the search for what I wanted to do later in life. Decisions led me to Switzerland, which subsequently enabled me to join 42 Lausanne. I learned a **lot of soft skills** during these experiences. Whether it was **communicating with others, organizing**, or **interacting with customers**.

PROJECTS

LLM Panel - LLM Chat desktop application

Electron | React | Typescript

Developed a standalone, **daily-driver interface for LLM interaction**, improving upon the Zed IDE text thread concept.

- Leveraged **Lexical** to build a **high-performance editor**.
- Architected a plugin-style system where users create custom commands via JSON configuration.
- Implemented native file system access commands (file, tree) for dynamic context injection and currently integrating multimodal capabilities (Voice, Image).

VOLTAIRE - AI writing assistant

Python | FastAPI | NextJS | SQL | React | Docker | DevOps

AI assistant specialized in writing, addressing the limitations of general-purpose tools like ChatGPT. Voltaire offers an intelligent text processing interface that learns the user's style and accelerates the transformation of ideas into structured documents.

Achievements

- Developed a sophisticated **agentic system**, with various agents responsible for distinct tasks (writing from scratch, editing documents, etc.).
- Implementation of a **continuous feedback system via the application**, and a **WhatsApp group**
- **Integration of Posthog** mainly for sessions and path analysis
- **Maintaining constant dialogue with users** to validate developments
- 2 weeks for the POC, approximately 2 more months for the final MVP. The app became a paid app shortly after.
- We have had several hundred registered users.

HACKATHON PROJECTS

MCPMEM - Portable user memory (Smithery Price)

Python | Neo4J | NextJS | Graphiti

Created **temporal knowledge graph (Neo4j/Graphiti) for LLMs**, **solving context portability issues**. Enables evolving, relationship-based memory for any app.

HealthSpector - AI symptom documentation tool

Python | NextJS | Docker

Created an **AI-powered symptom documentation tool with 3D body mapping and voice interaction**, enabling patients to generate shareable medical reports for doctors.

WRITTING BLOG POSTS

I write a few blog posts on my portfolio. My goal here is to share mainly about software architecture, whether it be my experiences, my discoveries, my technical choices (both good and bad), etc.

OPEN SOURCE CONTRIBUTIONS

I've started to participate in open source projects that I particularly like and use for a long time.

- **Main part of my contributions** with **Dokploy,** which is an open Source Alternative to Vercel, Netlify and Heroku.
- Also looked into the **Posthog website repository**

HOBBIES

Currently reading Designing Data-Intensive Applications (Martin Kleppmann)

4+ years cooking experience
Huge fan of Eloy Spinnler's restaurants

La Rochelle Marathon - November 2024
GR 441 - August 2025

Started calisthenics 2 years ago

Never miss a Gamers Assembly to have a great time with friends

Walking with my dog Helios
